Mini - Brand Guidelines - WORDMARK & LOGO

The Occuhealth wordmark is designed to reflect the brand's core pillars: Occupational Health, Environmental Health, and Workplace Safety, with each element contributing to a clear and purposeful identity.

The double 'O' symbol represents a dual layer of protection, reinforcing safety, security, and a holistic approach to care. Its circular form also conveys continuity and trust.

The colour palette combines a vibrant green, representing environmental awareness, with a rich cobalt blue for stability and professionalism, balanced by a soft off-white for clarity and warmth.

The wordmark is based on Nexa Bold, with refined spacing and adjusted angles to create a more distinctive finish. The 'U' is intentionally heavier, acting as a focal point and reinforcing the brand's customer-first approach, placing 'you' at the centre of Occuhealth's priorities.

A subtle heartbeat detail integrated into the terminal of the 'h' highlights the focal health aspect of the brand, adding a human, medical cue without overpowering the mark.

The logo is designed for flexibility, working effectively in both horizontal and stacked formats. The double 'O' can also be used as a standalone icon, providing a strong and recognisable brand element when a simplified mark is required.

Together, these elements create a confident, modern identity that communicates care, protection, and professionalism.

Mini - Brand Guidelines - COLOURWAY & CODES

The Occuhealth colour palette is designed to communicate professionalism, clarity, and showcasing environmental awareness through a simple but effective hierarchy.

The dominant colour is a rich cobalt blue. It is used across key backgrounds and primary touchpoints, with white typography providing maximum contrast and readability. Blue and white type can be inverted, depending on backgrounds.

White acts as the secondary colour and is used to create balance, space, and clarity across layouts. A soft off-white tone has been selected to avoid harshness.

The accent colour is a vibrant green, representing environmental health and sustainability. It is used selectively to highlight key elements, adding energy and visual interest without overwhelming the overall palette.

Together, these colours create a clear visual hierarchy, ensuring consistency and impact across all brand applications.

Mini - Brand Guidelines - CONSTRUCTION AND FONTS

Typography has been selected to ensure clarity and consistency across all communications.

Nexa Bold is used for headings and key messaging, and forms the basis of the Occuhealth wordmark, creating a clear visual link across the brand.

Neue Haas Unica W1G Regular is the primary typeface for all body text in both print and digital materials. It provides strong legibility and works well across a wide range of applications.

For internal use, Helvetica is recommended as a substitute where Neue Haas Unica is not available. It can be used for both headings and body text in documents such as Word files, emails, and general communications.

Mini - Brand Guidelines - BRAND STYLING & IMAGERY

The dominant brand colour is cobalt blue, supported by green accent elements and white space to create clarity and consistency. The green may be used selectively as a highlight colour, particularly through lines, dividers, icons, or to emphasise key messaging.

The 'O' symbol should be used as a recurring design feature throughout branded materials. It can be enlarged, cropped, faded into backgrounds, or used to highlight important information while maintaining a simple and modern appearance.

Imagery should reflect real workplace environments, healthcare settings, and professional interactions. Photography should feel authentic, clear, and people-focused, showing practical workplace situations where Occuhealth supports employee wellbeing, environmental awareness, and workplace safety.

As the business is led by two qualified nurses, the medical and human aspect of the brand should remain visible across pull-up banners, social media, presentations, digital advertising, and printed materials.

During the early stages of brand development, all communications should clearly display core business information including contact details, website, and service description|tagline to help build awareness and recognition.

Mini - Brand Guidelines - INTERNAL DOCUMENTS & COMMUNICATIONS

How to use your graphic icon in layouts and design

The Occuhealth 'O' symbol is designed to work as both a logo element and a flexible graphic device across internal and external communications.

The icon may be enlarged, cropped, repeated, or used subtly within layouts to add visual consistency and break up text-heavy documents. It can also be used to highlight key sections, titles, or important information.

Internal documents, the 'O' can be used as:

- A bullet point marker
- A page number device
- A section divider or graphic feature
- A background design element within presentations or documents

Using the graphic icon consistently across templates, presentations, reports, and digital documents helps strengthen brand recognition while adding a clean and professional visual structure.

All branded communications should remain simple, clear, and easy to follow, ensuring consistency across platforms such as Canva, PowerPoint, Word documents, and social media materials.
